- Smooth surface for animal safety
- Weather and water resistant
- UV Protected
- Lightweight
- Environmentally friendly
– stakes can be recycled
- New JFC Insulators
and applicator also available

Revolutionary Plastic Fencing Stakes

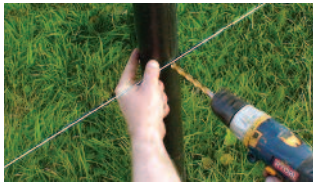

There are 3 methods
of fixing the wire to
the JFC Plastic Stake

Installation

A pilot hole is required. It is recommended to drive the stake with a mallet or a handheld post driver however a mechanical post driver can also be used with a minimum height drop (dependent on ground conditions)

Method 1

(Suitable for electric steel wire and sheepwire)
– Drill a 10mm hole in the front of the stake and secure wire with the New JFC Plastic Insulator

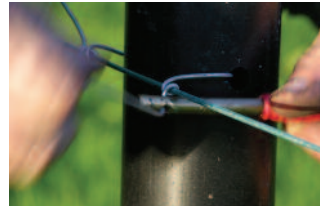

Method 2

(Suitable for electric steel wire)
- Drill a hole through the side of the stake and feed the wire through

Method 3

(Suitable for electric steel wire and barbed wire)
- Drill a hole through the side of stake. Run wire across the front of the stake and secure with wire from the back.
